

4 Powerful LLM Prompting Tricks You Must Know

TRICK 1: Start Designing Templates

LLMs perform better with structure.

```
prompt = f"""
```

```
You are a helpful AI assistant.
```

```
Task: Summarize the text
```

```
Tone: Professional
```

```
Length: 3 bullet points
```

```
Text: {input_text}
```

```
"""
```

Creating templates builds consistent results.

TRICK 2: Don't Explain... SHOW Pattern

Instead of instructions, give examples.

```
prompt = """
```

```
Convert text to sentiment:
```

```
Text: I love this product!
```

```
Sentiment: Positive
```

```
Text: This is terrible.
```

```
Sentiment: Negative
```

```
"""
```

Showing patterns creates context.

TRICK 3: Creativity vs Accuracy

Temperature = 0 → factual | Temperature = 1+ → creative

```
response = client.chat.completions.create(  
    model="gpt-4o-mini",  
    messages=[{"role": "user", "content": prompt}],  
    temperature=0.2  
)
```

Optimize creativity for relevance.

TRICK 4: More Tokens ≠ Better Output

Control length to optimize cost + speed.

```
response = client.chat.completions.create(  
    model="gpt-4o-mini",  
    messages=[{"role": "user", "content": prompt}],  
    max_tokens=100  
)
```

Optimal performance is key.
