

5 Ai project ideas you can build before your placement:

1. AI Mock Interviewer (with Feedback Loop)A tool that takes your answers (voice/text), evaluates them, and gives feedback on clarity, structure, and confidence.→ Shows product thinking + real hiring use-case
2. Smart Job Tracker with AI InsightsTrack applications, auto-summarize job descriptions, and get personalized suggestions on what to improve.→ Demonstrates practical problem-solving + personalization
3. AI Bug Reproducer ToolPaste an error/bug → tool suggests possible causes, edge cases, and even test cases to reproduce it.→ Signals strong debugging mindset (very underrated skill)
4. Personal Finance AI Coach (India-focused)Analyze expenses, suggest savings patterns, and give simple financial insights.→ Shows you can build for real users, not just developers
5. AI Content RepurposerConvert one piece of content into multiple formats (LinkedIn post → Twitter thread → script).→ Great mix of AI + creator economy relevance
